

APPLE

You will need:

14 Red sticks
2 White sticks
1/2 Green stick
1/2 Brown stick
1/4 Black stick
Foil

Crimper Cutter

1

Step 1:

Start by creating a foil base in the shape of a ball with a dent on top (where the stem will come out) and a bigger dent on the side (which will become the "bite" out of the apple).

2

Step 2:

Cover the apple with red sticks – avoiding the dented area that will become the "bite" out of the apple. This will take 14 red sticks in total.

3

Step 3:

Coil white sticks into the "bite" area as shown.

4

Step 4:

Twist a small piece of black, and press onto the top of the apple for the stem. Cut a half piece of green in half, then use these two pieces to form leaves. Press each leaf onto the top of the apple near the stem.

5

Step 5:

Fold 1/2 brown stick into thirds and shape into a wavy shape to become the worm. Press one end of the worm into the white area of the apple.

6

Step 6:

Use tiny pieces of white and black to give the worm eyeballs.
